# WORLD TRADE IN SELECTED AGRICULTURAL COMMODITIES 1951-65

**VOLUME I.—Beverage Crops: COFFEE, COCOA, AND TEA**

**United States  
Department of  
Agriculture**

**National Agricultural Library**

Studies in the Series on World

Trade in Selected Agricultural

Commodities, 1951-65

Beverage Crops: Coffee, Cocoa, and Tea

Food and Feed Grains: Wheat, Rice, Maize (Corn), Barley, and Other Cereals

Textile Fibers: Cotton, Jute, and Other Vegetable Fibers

Sugar, Fruits, and Vegetables

Oilseeds, Oil Nuts, and Animal and Vegetable Oils

## PREFACE

This is one in a group of statistical studies on world agricultural trade, prepared as a part of the research project, "Analysis of Demand Prospects for Agricultural Products of the Less Developed Countries," being conducted by the Economic Research Service under a participating agency service agreement for the Agency for International Development.

These volumes present 1951-65 data on trade flows of selected agricultural commodities for 19 importing or exporting regions, showing regions of origin of imports and destination of exports. These data, not available in this form from other sources, are presented in tabular matrix form so that the volume of trade--exports and imports--among the 19 regions can readily be discerned. These statistical series include commodities which account for 80 percent of the agricultural exports and 33 percent of all exports of less developed countries and are believed to be the most comprehensive series available. These series should fill a part of the information gap in international trade and make possible a more comprehensive analysis of changes in the patterns of trade in agricultural products. Although there is some repetition of world trade information in these studies, it is necessary because not all readers will want the entire group or series.

This volume on beverage crops--coffee, cocoa, and tea--is based on data from many different sources. It has been necessary to make estimates of trade flows based upon value data for some countries because of incomplete reporting. World exports of each commodity in any one year equal world imports.

This volume also includes tables for 1964 showing total world trade and total agricultural trade for 19 importing regions and regions of origin of their imports. Conversely, they show trade flows for 19 exporting regions and destination of their exports. These data on agricultural trade are in a form not available from other sources. They provide a basis for observing the importance of beverage crops in total trade and in agricultural trade by countries and regions.

The research project on the demand prospects for agricultural exports of less developed countries is being conducted by ERS in three phases: (1) historical analysis of trade flows, (2) analysis of demand prospects, and (3) analysis of policy implications of estimated world demand prospects, under the joint supervision of an ERS Technical Advisory Committee by Arthur B. Mackie and Anthony S. Rojko. Special acknowledgments are given to Bart S. Fisher, Kenneth N. Wegenhoft, and Alan Darke for their work in compiling the trade data on coffee, cocoa, and tea, respectively. Martin E. Abel, Deputy Assistant Secretary, International Affairs, was Chairman of this committee at the start of the project.

## SUMMARY

World trade in tropical beverage crops increased steadily during 1951-65 at an average annual rate of 3.9 percent. Exports of cocoa beans were the leader--growing at 4.9 percent, while coffee and tea lagged at 3.7 and 2.3 percent per year, respectively.

World trade in tropical beverage crops--coffee, cocoa, and tea--was valued at \$3.7 billion or about 9 percent of world agricultural trade in 1964. The largest of these three export crops was coffee, representing about \$2.5 billion or 6 percent of world agricultural trade in 1964. The value of world tea trade was \$696 million; that of cocoa was \$533 million.

Many less developed countries depend heavily upon agricultural exports for exchange earnings to finance imports of capital goods needed for economic development. In 1965, 11 countries depended upon coffee, cocoa, or tea exports for more than 50 percent of export earnings. There were 33 countries that relied upon either coffee, cocoa, tea, cotton, sugar, oilseeds and vegetable oils, or fruits and vegetables for more than 50 percent of total export earnings.

Coffee exports were of major importance to Latin America, and East and West Africa. Latin America accounted for about two-thirds of all coffee exports in 1964-65. Cocoa exports were of major importance to West Africa, accounting for 72 percent of world cocoa exports in 1964-65. Tea was of major importance to South Asia, which as a region accounted for about 70 percent of world tea exports in 1964-65.

The major importers of tropical beverage crops were the United States, the European Economic Community (EEC), and the European Free Trade Association (EFTA). In 1964-65, the United States alone accounted for 46 percent of world coffee imports, 29 percent of all cocoa bean imports, and 10 percent of all tea imports. Western Europe (EEC and EFTA) accounted for 37 percent of the coffee, and 46 percent of cocoa beans, and 46 percent of world tea imports in 1964-65.

### INTRODUCTION

Many less developed countries depend heavily upon agricultural exports for exchange earnings to finance imports of capital goods. For example, according to the 1966 FAO Trade Yearbook (7) 1/, there were 66 less developed countries and territories in 1965 with agricultural exports accounting for more than 50 percent of total export earnings. Because of this heavy dependence upon agricultural exports, fluctuations of export prices for agricultural commodities cause large variations in export earnings and total economic growth. These variations are especially large in the case of countries depending upon export earnings from only one or two commodities.

In 1965, there were 11 countries in which coffee, cocoa, or tea exports accounted for more than 50 percent of export earnings (table 1). Eight countries depended upon sugar, seven countries upon oilseed and vegetable oils, three countries upon cotton, and two countries each upon rice and fruits and vegetables for more than 50 percent of their export earnings. About 60 additional countries relied upon one of these export crops for more than 20 percent of their export earnings.

The less developed countries need better information on demand prospects for agricultural exports as a basis for planning and carrying out economic development programs. Future growth in the export demand for agricultural commodities of the less developed countries will influence the amount of land and other resources that can economically be used for expanding the production of export commodities.

This report presents detailed trade data that can be used for evaluating trade prospects for coffee, cocoa, and tea. It contains historical data on the volume of exports and imports of these commodities for 19 regions for 1951-65. Trends in the growth of trade in these commodities by major countries and regions

are compared with trends in population and per capita income growth for 1951-65. Data on value of exports and imports of these commodities by regions are not now available in trade matrix forms. However, world average export unit values for beverage crops are shown in table 2 for prewar and 1948-66. Value trade matrices can be obtained by multiplying these unit prices by the quantities in the following tables. However, such values will not necessarily equal the import or export values as reported by the United Nations, since the unit prices will differ somewhat by countries.

## WORLD PATTERNS OF AGRICULTURAL TRADE

The volume of world agricultural exports increased about 3.5 percent per year from the average of 1948-52 to 1964-65. In real terms, the value of agricultural exports grew at an annual rate of 2 percent during this period (10).

Trade in agricultural products in 1964 was about one-fourth the value of total world trade (tables 3 and 4). In 1964, the value of world agricultural trade amounted to \$38.6 billion. As a group, the less developed countries accounted for 37 percent of world agricultural exports and 16 percent of world agricultural imports (table 5). The value of agricultural exports of the less developed countries in 1964 was \$14,468 million, whereas their agricultural imports were only \$6,186 million. The developed countries were the major markets for the agricultural exports of less developed countries--accounting for 78 percent. The United States alone took 21 percent of the agricultural exports of less developed countries. Agricultural exports of the less developed countries to each other accounted for 14 percent.

As with agricultural exports, the developed countries accounted for the major share (61 percent) of the agricultural imports of the less developed countries. The less developed countries turned to other less developed countries for 32 percent of their agricultural import needs, or slightly less than the 36 percent from the United States (table 5). The remaining 7 percent of agricultural imports of the less developed countries come from the Communist Bloc.

### IMPORTANCE OF BEVERAGE CROPS IN WORLD TRADE

The total value of world trade in tropical beverage crops as reported by the 1966 FAO Trade Yearbook was \$3.7 billion--about 9 percent of the value of world agricultural trade in 1964. Coffee was by far the largest of the three tropical beverage crops--coffee, cocoa, and tea--representing about \$2.5 billion or 6 percent of world agricultural trade in 1964. The value of world tea trade was \$696 million, while the value of world cocoa trade was \$533 million. <sup>2/</sup>

Regionally, coffee exports are of major importance to Latin America and East and West Africa; Latin America accounted for about two-thirds of world coffee exports in 1964-65. Coffee exports in 1964 accounted for 13 percent of total export earnings in Latin America, 11 percent in West Africa, and almost 14 percent in East Africa. On the other hand, cocoa exports are of major importance to West Africa, which accounted for 72 percent of world cocoa exports in 1964-65. Cocoa exports in 1964 accounted for 14 percent of total export earnings in West Africa. South Asia is by far the largest exporter of tea, accounting for almost 70 percent of world tea exports in 1964-65. Tea exports in South Asia in 1964 accounted for 18 percent of total export earnings. They accounted for 2.5 percent of total export earnings in East Africa.

---

<sup>2/</sup> These data on world trade are averages of world imports and exports, as reported by FAO (7).

1/ Calculated from data in tables 3 and 4.

2/ Shares of less developed countries are shown in parentheses.

The major importers of tropical beverage crops are the developed countries. In 1964-65, the United States alone accounted for about 46 percent of world coffee imports, 29 percent of world cocoa bean imports, and 10 percent of world tea imports. The other major importing market is Western Europe--EEC and EFTA. These two groups of countries accounted for about 37 percent of world imports of coffee, 46 percent of cocoa bean imports, and 46 percent of tea imports in 1964-65.

#### HISTORICAL TRENDS OF TRADE IN BEVERAGE CROPS

The volume of world trade in tropical beverage crops increased rather steadily during 1951-62, from 3,045,000 tons in 1951 to 4,828,000 tons in 1965, or by 3.8 percent per year (table 6). 3/ However, there were mixed tendencies in the volume of trade in 1965--coffee decreased 3.9 percent, from 2,928,000 to 2,815,000 tons, while cocoa and tea increased 17.5 and 2.0 percent, respectively, over the 1964 levels (table 6).

There were marked differences also in the growth rates in volume of trade for the three tropical beverage crops during 1951-65. The most rapid growth was in cocoa beans, which increased 4.9 percent per year; the volume of trade in tea was the most sluggish, growing at an annual rate of only 2.3 percent.

3/ All tons in this report are metric.

Table 6.--World trade in tropical beverage crops, 1951-65

Year	Total	Coffee	Cocoa	Tea	Total	Coffee	Cocoa	Tea

1965 ...	4,828	2,815	1,398	615	115	108	137	109

Exports of coffee increased at about the same rate as all tropical beverage crops--at 3.7 percent per year. These historical trends in volume of exports for the various crops are shown in table 6 and figure 1, while the growth rates for these three crops are shown in table 7 along with the growth rates in population and per capita GNP.

Latin America is the largest coffee exporter. However, the volume of coffee exports for this region grew much more slowly (1.9 percent per year) than for West and East Africa, which expanded their volumes of coffee exports by 9.6 and 7.2 percent per year, respectively. The slower rate of growth in coffee exports for Latin America was highly influenced by the slow growth of coffee imports in the United States--the major import market for Latin American coffee.

The rapid growth of coffee exports in East and West Africa is related to the rapid growth in imports of coffee by the EEC and EFTA (table 7)--the major import market for African coffee. Their growth in coffee imports of about 6 percent per year was much greater than the 1.3 percent per year growth rate of United States coffee imports. It is the major market for Latin American coffee exports. The more rapid rate of growth of coffee imports of the EEC and EFTA is related to the higher income elasticity of demand for coffee in these regions than in the United States.

# WORLD TRADE IN TROPICAL BEVERAGE CROPS, 1951-65

Figure 1

Japan .....	14.2	12.7	15.0	1.1	8.6
World .....	3.7	2.3	4.9	2.0	1.0

The major exporting region of tea, South Asia, experienced a slower rate of growth in the volume of tea exports than did East Africa or Latin America. The changes in Latin America, East Africa, and Japan were from a very small base, and higher growth rates in these cases may be misleading.

A more detailed analysis of the changes in the patterns of exports and imports of these tropical beverage crops is outside the scope of this statistical volume. However, it is hoped that the above general observations of historical trends will be helpful to those using the statistical summaries at the end of this report.

#### EXPLANATION OF STATISTICAL TABLES

A portion of the Standard International Trade Classification scheme for agricultural products included in this study is given in table 8. Trade data in tables 9-68 were compiled on the basis of this scheme. Those wishing a more detailed definition of this classification should refer to the United Nations manual (11).

The world is subdivided into 19 major trading regions in the tables on trade in beverage crops. They are:

Developed Regions and Countries

1. United States.
2. Canada.
3. Japan.
4. EEC--European Economic Community--includes Belgium, Luxembourg, France, Fed. Rep. Germany, Italy, and Netherlands.
5. EFTA--European Free Trade Association--includes Austria, Denmark, Norway, Portugal, Sweden, Switzerland, and United Kingdom.
6. OWE--Other Western Europe--includes Cyprus, Finland, Greece, Iceland, Ireland, Malta, and Spain.
7. Australia, New Zealand, and South Africa.

Eastern Trade Regions and Countries

8. Eastern Europe includes Albania, Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, Romania, and Yugoslavia.
9. U.S.S.R.

10. Communist Asia includes Mainland China, Mongolia, North Korea, and North Vietnam.

#### Less Developed Regions and Countries

11. Latin America includes all countries in Central and South America and the Caribbean.
12. North Africa includes Algeria, U.A.R. (Egypt), Libya, Morocco, Sudan, and Tunisia.
13. West Africa includes Angola, Cameroon, Central African Rep., Chad, Congo Rep. (Braz.), Democratic Republic of Congo (Kinshasa), Dahomey, Gabon, Gambia, Ghana, Guinea, Ivory Coast, Liberia, Mali, Mauritania, Niger, Nigeria, Portuguese Guinea, Senegal, Spanish Sahara, South West Africa, Upper Volta, and Togo.
14. East Africa includes Botswana, Burundi, Comoro Islands, Ethiopia, Kenya, Lesotho, Mauritius, Malawi, Malagasy Rep., Mozambique, So. Rhodesia, Reunion, Rwanda, Somali Rep., Fr. Somaliland, Swaziland, Tanzania, Uganda, and Zambia.
15. West Asia includes Aden, Bahrain, Iran, Iraq, Israel, Jordan, Kuwait, Saudi Arabia, Syria, Turkey, Lebanon, Qatar, and Yemen.
16. South Asia includes Afghanistan, Bhutan, Ceylon, India, Nepal, and Pakistan.
17. South East Asia includes Burma, Cambodia, Laos, South Vietnam, and Thailand.
18. Other East Asia includes Hong Kong, South Korea, Macao, Philippines, Portuguese Asia, Ryukyu Islands, and Taiwan.
19. Far East and Oceania includes Australian New Guinea, Brunei, New Caledonia, Fiji, Guam, Indonesia, Malaysia, West Irian, Papua, French Polynesia, Sabah, W. Samoa, Sarawak, and Singapore.

The quantity data for trade in coffee, cocoa, and tea were compiled from the commodity trade statistics of the United Nations, and supplemented with data from individual country trade statistics, FAO, OECD, EEC, and international commodity association trade publications. Both exports and imports for all countries were compiled in tabular matrix forms and further aggregated into the more concise tabular matrix of 19 major importing and exporting areas (tables 9-68).

The reader can best understand the use of the following trade matrices if one or two things are kept in mind. First, the column headings are importing regions, while the exporting regions for each column are shown on the rows in the far left-hand stub.

For example, in the tabular matrix for coffee for 1960 (table 18) the origin of imports for the EEC can be found by reading down the column labeled EEC. The first figure (3) represents imports of coffee of 3,000 tons from the United States. The second figure (7) represents coffee imports of 7,000 tons from countries within the EEC. Since the EEC countries do not produce coffee, these imports can be considered as re-exports. As one proceeds down the column to the figure (344), it can be seen that the EEC imported 344,000 tons of coffee from Latin America. The last figure (617) at the bottom of the column represents the total coffee imports, in thousand metric tons, of the EEC in 1960.

The exports of any region can be found by reading across the columns on a particular row, say Latin America. Latin America exported 1,111,000 tons to the United States, 47,000 to Canada, 6,000 to Japan, 344,000 to the EEC and so forth across the table until we arrive at the total coffee exports from Latin America of 1,849,000 metric tons.

The absence of data for any one importing region, say Japan in 1951, does not mean that Japan did not have any coffee imports. Rather, it means that if Japan had any coffee imports, they were less than 500 metric tons. Similar interpretations can be made for other regions where there are no data. For most purposes, the absence of data means trade flows of less than 500 metric tons.

The two trade matrices that summarize world total and agricultural trade for 1964 in tables 4 and 5 are presented as guidelines so that appraisals can be made of the magnitude of export earnings by regions in a recent year and as a basis of comparison for those wishing to evaluate export earnings from coffee, tea, and cocoa. This latter comparison can be made by multiplying selected unit prices (shown in table 2) by the quantity data in each cell of the quantity trade tables. However, these resulting values can be considered as only estimates of the value of exports or imports. Actual value trade matrices could have been compiled from the United Nations trade data, but time limitations prevented this undertaking.

The trade data tables were compiled primarily on the basis of import statistics, since the developed countries have had the most highly developed set of historical statistics and a longer history of reporting these statistics to the United Nations. When import data were lacking, they were supplemented by export statistics. In all cases where there were conflicting data, efforts were made to reconcile these, subject to the magnitudes of exports and imports of any one region as listed by the trade statistics of individual countries shown in the FAO trade yearbook.
